DWARF BEAN, THE COMMODORE

A dwarf or bush type of the popular Pole Bean "Kentucky Wonder." A very productive, medium early variety having round, fleshy, light green pods, 8 to 9 inches long. Stringless, fiberless and of excellent quality. One of the best of the newer varieties.

Pkts. only, 25c. each

BEET, CROSBY'S IMPROVED EGYPTIAN PERRY'S SPECIAL STRAIN

* Where a first early sort is desired, this variety is unequalled. The medium-sized roots, so eagerly sought for, are decidedly attractive in appearance; smooth, free from rootlets, a rich dark red in color, and uniformly round. The flesh is a deep blood-red with slightly lighter zonings, and in texture, crisp and free from any tough fiber. When cooked, it is sweet and tender. Our stock of this superior strain is selected with the greatest care as to color, shape and earliness.

Pkt. 15c., oz. 45c., $\frac{1}{4}$ lb. \$1.25, lb. \$3.75

HYBRID SWEET CORN EARLIGOLD

One of the earliest hybrids, maturing in about 73 days, an important factor where the season is short. $6\frac{1}{2}$ -inch ears with 12 to 16 rows of medium yellow kernels. Of excellent quality and a splendid variety for canning.

Pkt. 25c., lb. 65c., 2 lbs. \$1.25, 6 lbs. \$3.50

LINCOLN

A medium early variety. The ears measure 7 to $7\frac{1}{2}$ inches in length with 12 to 16 rows of golden yellow kernels of good quality. Fine for a main crop.

Pkt. 25c., lb. 65c., 2 lbs. \$1.25, 6 lbs. \$3.50

MIDGET CORN

An excellent type for small gardens. The plants grow $2\frac{1}{2}$ to 3 feet in height and produce ears 3 to 4 inches in length. The flavor is delicious and a rare treat is in store for those who have never tried it. Be sure to include this worthwhile novelty in your order. We know you will be pleased as we have had so many excellent reports from our customers who have grown it.

of EXCEPTIONAL MERIT

Pkt. 15c., oz. 55c., $\frac{1}{4}$ lb. \$1.50

CUCUMBER, PERRY'S NONPAREIL

A splendid, dark green Cucumber that has no equal for growing under glass and has proven superior as an outdoor variety. The dark green color, symmetrical shape and small seed cavity are outstanding characteristics of the 9 to 11 inch fruits. The flesh is tender, crisp and of fine flavor. Very productive.

Pkt. 25c., $\frac{1}{2}$ oz. 60c., oz. \$1.00, $\frac{1}{4}$ lb. \$3.50, lb. \$12.00

PEAS, MONTANA MONARCH (Wilt Resistant)

An extra early variety maturing in 60 days. The 4-foot vines are strong and vigorous, producing quantities of large, medium green pods $4\frac{1}{2}$ to 5 inches long, well filled with 6 to 8 tender peas. Unsurpassed for quality and flavor.

Pkt. 15c., lb. 50c., 2 lbs. 95c., 7 lbs. \$2.75

SQUASH, BUTTERNUT

A small Squash suitable for home gardens with very dry, sweet yellow flesh of excellent flavor. The first fruits mature early in August, the plants continuing to bear until frost. The outer shell is smooth and hard. The fruits average $3\frac{1}{2}$ to 5 lbs. and keep well until February. Can be grown almost anywhere.

Pkt. 15c., $\frac{1}{2}$ oz. 60c., oz. \$1.00, $\frac{1}{4}$ lb. \$3.00

SQUASH, YANKEE HYBRID

A fine new Straightneck Summer Squash which will produce twice the quantity of marketable fruits several days earlier than any other variety. Excellent for first planting. Of special value to market growers, but will prove equally popular with the home gardener. Be sure to include this splendid new Squash in your Victory Garden.

Pkt. 25c., oz. \$1.00, $\frac{1}{4}$ lb. \$3.00

TAMPALA

A vegetable of recent introduction which when it is cooked is served like Spinach. Entire plants, when they have grown to a height of 5 or 6 inches, make delicious greens raw or cooked. If permitted to grow, the plants will attain a height of about 2 feet when branches 4 to 5 inches in length may be gathered. These young stem tips and leaves may be cooked together; the larger stems up to the size of one's little finger, may be separated from the leaves and cooked separately for 8 to 10 minutes as you would cook Asparagus.

Sow out of doors when the ground has become warm. If the entire plant is to be used when small, thin out to 2 inches apart. If the plants are to be allowed to develop, thin out to 18 inches apart.

Pkt. 15c.

TOMATO, JUBILEE

A splendid new variety, bright golden orange in color. The fruits are uniform in size and shape, meaty and of excellent flavor.

Pkt. 25c., $\frac{1}{2}$ oz. \$1.25, oz. \$2.00

TOMATO, PERRY'S SUPERB

Unsurpassed for growing under glass but does equally well when trained on trellises in the garden. The plants are strong and vigorous, producing quantities of well-formed scarlet fruit of excellent flavor. An outstanding characteristic of this variety is its immunity to mildew, a most important factor.

Pkt. \$1.00

Cultivate frequently, though not when in bloom or when the vines are wet—you may spoil the set or spread rust. Any good garden soil enriched with a "5-10-5" Fertilizer will produce an abundant crop in six weeks after planting. Watch for Mexican Bean Beetles after June 15th. SWEET CORN

Postpaid at pound prices. For larger quantities by Parcel Post, add postage

PEAS

Plant 2 lbs. per 100 feet; about 100 lbs. per acre

Culture—Peas can be planted as early in the Spring as the ground can be worked. Broadcast in furrows 6 to 8 inches wide and 30 inches apart so that 1 lb. will plant 50 feet. Make the first sowing as early as possible and follow up with subsequent plantings to insure a continuous supply throughout the season. For later sowing we recommend the earlier varieties. As Peas are legumes, it is well to inoculate the seed with Legume Aid. Instructions for use with each package.

FRANKLIN PARK LAWN SEED

TRADE MARK REGISTERED

The Best Mixture for Sunny Lawns

Recognized as a quality mixture for those who want the best. We blend it ourselves fresh every season from heavy, recleaned, live seeds of only those grasses known to be adapted to most all of our soils and climate. A small amount of White Dutch Clover is included. It is free from worthless chaff and dirt. It is high in germination, as tests will prove, and complies with the Massachusetts seed law. Franklin Park is used extensively on lawns of fine homes and large estates, in parks and cemeteries all over New England. Under ordinary conditions, 1 lb. (1 qt.) is sufficient to properly seed 250 to 350 square feet.

½ lb. 40c., 1 lb. (1 qt.) 75c., 5 lbs. \$3.65, 10 lbs. \$7.25, 16 lbs. \$11.20, 32 lbs. (1 bu.) \$21.45, 100 lbs. \$66.00

PERRY'S SHADY SPOT LAWN SEED

There's no better mixture for sowing on the north side of buildings, between houses or under shade trees receiving sunshine less than half the day

Our Shady Spot Lawn Seed is blended from the best grasses possible to obtain for this purpose, only those that grow and flourish under shady conditions in their natural and wild state being used. It is always advisable for those who are seeding down shady places to supply new soil, if possible, especially if large trees are producing the shade, as their roots spread so fast as to quickly exhaust its nourishment. Liberal amounts of fertilizer are as necessary for lawns under shade trees as are plenty of seed and water. Trimming to allow more air and light is frequently helpful.

½ lb. 45c., 1 lb. 80c., 5 lbs. \$3.80, 10 lbs. \$7.50, 25 lbs. (1 bu.) \$17.50, 50 lbs. \$35.00, 100 lbs. \$68.00

PERRY'S BANK and TERRACE MIXTURE

Sow for Quick Results and Permanence

A splendid mixture of varieties with strong, deep-spreading roots of quick growth. Most effectual in binding loose soils, and preventing slopes from being washed out by rains. Blended for adverse conditions and to produce a fine, smooth, velvety sod of a beautiful rich green. Broadcast 50 lbs. of 6-8-2 Fertilizer to each 1000 square feet and rake in lightly. Sow 1 lb. of our Bank and Terrace Mixture to each 250 to 300 square feet and rake again lightly and firm with a roller or the back of a spade. On steep slopes it may be well to sow a quart of seed oats to each 2 lbs. of seed to help temporarily to retain the surface.

25 lbs. \$17.00, 50 lbs. \$33.00, 100 lbs. \$65.00

PERRY'S SEASHORE LAWN GRASS MIXTURE

Many a lawn along the New England Shore has been grown from this mixture

A rich, green lawn is especially appreciated and desirable at the seashore, but usually conditions are decidedly unfavorable. Sandy soils are benefited by the addition of clayey soil, peat moss and other organic matter resulting from the use of Wizard Brand Cattle and Sheep Manures. Top soil to the depth of 4 inches should be broadcasted, as grass will not grow well in pure sand. The grasses used in our Seashore Mixture are adapted to unfavorable conditions, will quickly germinate in the top soil and make strong roots which will reach down into the sand for moisture. In order, however, to keep the seaside lawn in good condition it should be watered liberally each evening and also receive an occasional application of our sterilized Sheep Manure to maintain a supply of quickly available plant food. Sow 1 lb. to every 250 square feet.

Lb. 80c., 5 lbs. \$3.80, 10 lbs. \$7.50, 25 lbs. \$17.50

PERRY'S PUTTING GREEN MIXTURE

For an Ideal and Lasting Turf

This is an extra fine lawn grass mixture that will produce at home a turf as fine as on the putting greens of golf clubs. We recommend it highly and suggest when sowing to prepare the soil and fertilize it in the usual way. In order to secure even distribution, divide the seed and broadcast one-half each way of the lawn, allowing 1 lb. to every 150 to 250 square feet.

Lb. 95c., 5 lbs. \$4.50, 10 lbs. \$8.50, 25 lbs. \$20.75,

SOW WINTER RYE AS A COVER CROP

There are hundreds of gardens that can be benefited by a Fall planting of Winter Rye. Sown at the rate of 5 lbs. to a space 40 by 40, raked in and allowed to grow until April, Winter Rye will produce an abundance of roots and foliage that will not only restore fertility to soils but improve them by adding a lot of desirable humus. It is a logical and sensible thing to do because the cost is slight and the gain great. If for no other reason than to keep down a growth of weeds after your vegetables have been harvested, Fall planting of Rye even as late as November would be a logical procedure.

INOCULATION FOR LEGUMES

It is a proven, scientific fact that all legumes thrive only when certain bacteria are present in the soil. Some soils may be entirely without them—these Nitrogen-gatherers. Under such conditions one may fail to get a good "catch" from seed planted. Inoculation of seed with bacteria before planting is, therefore, a sound investment and safe insurance. The cost is slight. We sell the jelly form Legume Aid with instructions for use in every package.

GARDEN HIGHLIGHTS *for 1945*

MARIGOLD FLASH

Silver Medal Winner, All-America Selection for 1945

4164 A new Single French Marigold especially noteworthy for the bright combination of colors. In most of the flowers a base color of tangerine is overlaid or marked with rich Marigold red. In cool weather, this velvety red predominates in the youngest flowers, while in hot weather the tangerine prevails. Individual flowers $1\frac{3}{4}$ in. and more across are produced in 10 weeks from seed and the plants bloom profusely until frost. Strong, medium length stems recommend the flowers for cutting. Plants perfectly uniform and compact in habit of growth develop into bushy mounds averaging 18 in. in height and 24 to 30 in. in spread. Finely cut foliage has good color and quality. **Pkt. 25c.**

MARIGOLD, MAMMOTH MUM

Honorable Mention, All-America Selection for 1944

4088 The new Mammoth Mum is a Chrysanthemum-flowered Marigold. Early to flower, it affords the gardener an opportunity to have "Mums" for garden and cut flower display months before frost even threatens. Flowers $3\frac{1}{2}$ in. and more across and 2 in. deep make it the largest Chrysanthemum-flowered Marigold. The fluffy, ball-like light sulphur yellow blooms made up of many finely cut individual florets intricately intertwined in true Mum form are borne profusely on upright plants 30 in. tall. Flower stems are extremely long and sturdy, making them easy to handle in arranging. **Pkt. 25c.**

Marigold, Real Gold

MARIGOLD REAL GOLD

Bronze Medal Winner, All-America Selection for 1945

4077 The largest of all Carnation-flowered Marigolds. The full double giant blooms, averaging 4 in. across, are a striking shade of golden orange illumined with yellow. Plants average 25 in. in height and are ideal for beds and borders. Plan to grow this outstanding new Marigold and enjoy its beauty. **Pkt. 25c.**

COCKSCOMB MAPLE GOLD

1926 A new variety of this popular, old-fashioned Annual that will add color and interest to your garden. The majority of the heavily frilled and crested combs vary in color from light to dark shades of pink tipped with gold, giving them a most unusual and beautiful appearance. Pkt. 25c.

DAHLBORG DAISY

2480 Tiny, Daisy-like, golden yellow blooms produced in great profusion on plants growing 6 in. in height with a spread of 8 in. making them especially adaptable for edges and borders. The finely cut fern-like foliage adds greatly to the attractiveness of this splendid annual. Blooms continuously from early Summer until frost. Seed should be sown as early as possible in the Spring.

Pkt. 25c.

STAR OF TEXAS

6595 A very beautiful, free flowering Annual, also known as Texas Daisy. The Daisy-like blooms are composed of many glistening yellow, sharply pointed petals. The stems are of medium length, thin and wiry, making the flowers suitable for cutting. Bushy and erect, the plants thrive in full sun and withstand hot, dry weather remarkably well.

Petunias Are Unexcelled Among Annuals for Continuous Bloom

Aster, Princess Bonnie

PRINCESS ASTERS (WILT-RESISTANT)

A beautiful new type having full, deep crested centers surrounded by several rows of broad guard petals. The blooms averaging 3 to 3½ inches in diameter, are borne on strong stems, making them most desirable for cutting. The varieties offered below are magnificent and well worthy of a place in your garden.

1030 **Princess Anne.** Light pink changing to rose as the flower matures. **Pkt. 25c.**

1025 **Princess Bonnie.** Soft salmon rose with a center of rich gold. **Pkt. 25c.**

1035 **Princess Marsha.** Bright crimson with yellow center. **Pkt. 25c.**

GOLDEN AGERATUM

148 Because of the close similarity of the flowers to those of the Ageratum this annual plant is commonly known as the Golden Ageratum. The flowers form large, fluffy, golden yellow clusters on plants averaging 12 in. in height. If sown thickly it will produce a dwarf golden yellow hedge making a splendid border. If individual plants are desired which will give material for cutting ample space should be left between them. **Pkt. 25c.**

CORAL FLOWER

2263 A new annual plant bearing great panicles of small rosy pink, star-like flowers on long, wiry stems, 24-30 in. in length rising from thick, dark green foliage at the base of the plant. Following the flowers come jewel-like seed capsules resembling beads of brightly polished coral. Easily grown in full sun blooming from mid-June until late October. Splendid for bedding purposes and as a cut flower. Sow in late Spring when the soil is warm. **Pkt. 25c.**

PETUNIA, ENGLISH VIOLET

5324 A beautiful new shade of violet blue quite different from any other mid-blue variety. The plants average 15 to 18 in. in height and the flowers hold their uniformity of color from the time they first open until frost. **Pkt. 20c.**

DWARF BEDDING PETUNIA, CHEERFUL

Bronze Medal Winner, All-America Selections for 1944

5346 A brand new color and growing habit distinguishes the new single Petunia "Cheerful." The name is acquired from the crisp, satiny sheen of its salmon-pink flowers. At first the growth is low, spreading close to the ground; later the plants form a mound 10 to 12 in. high with a spread of 2 ft. Growth is densely compact with no tendency whatever to thin out, fall over, or to spread open in the center; a valuable and distinctive characteristic. The clear salmon-pink flowers have a deeper rose veining toward the throat and here and there among the mass of blooms are ones a tint or two lighter than others. Studded, from early Summer until frost with flowers 2½ in. and more across, Petunia "Cheerful" makes a place for itself in garden beds and borders wherever a delightful color is wanted. Other flowers in pastel tints of every conceivable hue may be combined with plantings of this Petunia. **Pkt. 25c.**

PETUNIA, GLAMOUR

5283 Strong growing plants producing large, heavily ruffled salmon-rose blossoms with beautifully veined white throats. The plants attain a height of 18 in. by the end of the season but start flowering when only 6 in. tall. **Pkt. 35c.**

PETUNIA, IGLOO

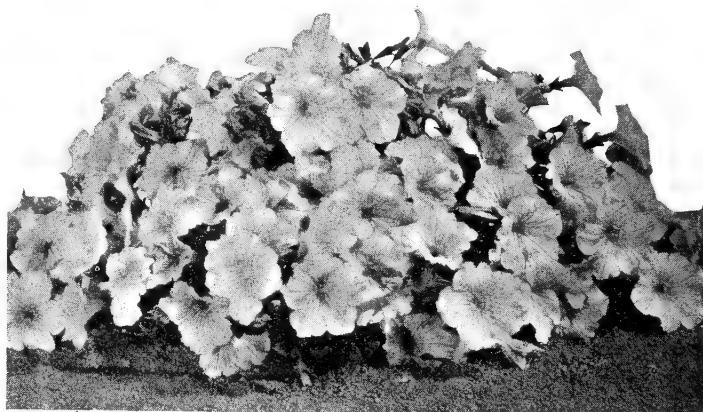

5326 An outstanding new dwarf Petunia with medium-sized pure white flowers with a slight yellow shading in the throat. Each plant is a perfect mound 8 to 10 in. high, reminding one of the Eskimo igloo and is covered with a wealth of bloom throughout the entire Summer. The fact that the plants remain so dwarf and compact (provided the soil is not too rich) makes it ideal for borders. **Pkt. 20c.**

RUDBECKIA, STARLIGHT

6249 Strong growing, branching annual plants, 3 ft. tall, producing quantities of double and semi-double flowers on long stems, ranging in color from primrose yellow to mahogany and bicolors with dark centers. Splendid for cutting and floral arrangements. **Pkt. 25c.**

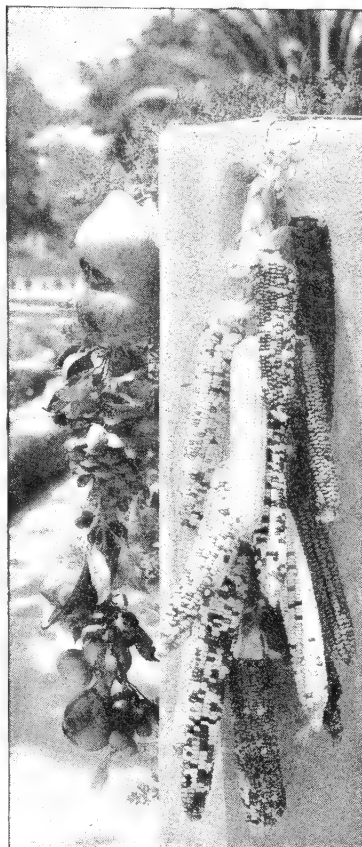

SOUTHERN STAR

6590 A novel and interesting plant from the Argentine bearing upfacing sprays of bright sky blue flowers. The unusual coloring appears as if painted on. Whole constellations of 5-petaled, star-shaped flowers are open at once, giving a most delightful effect. The plants grow to a height of 15 in., then arch over as the upfacing flower sprays appear early in June, continuing until the middle of October. The seed germinates quickly and the young plants transplant easily in the open ground where the plants bloom freely in Summer heat. **Pkt. 25c.**

Try the Beautiful Princess Asters—Wilt Resistant

PERRY'S PRIZE ASTERS

WILT-RESISTANT STRAINS. Wilt most commonly occurs in the hot Midsummer months just as the buds are beginning to open. The plant wilts, the leaves first turn yellow, then brown and curl, finally dying. The remedy is to use Wilt-resistant Strains that have proven so valuable that wherever available we offer them to the exclusion of others. Plants grown from Wilt-resistant Strains are not immune to the disease known as Aster "yellows," which is quite different and is transmitted by insects. However, they are not so susceptible to infection from it as they have a sturdier constitution. Varieties marked with asterisk (*) are Wilt-resistant.

FOR THE CONTROL OF THRIPS

Before planting we suggest mixing 2½ ozs. of Semesan in 1 gal. of water allowing the bulbs to soak in this solution for 7 hours.

When the plants have attained a height of 6 inches the U. S. Dept. of Agriculture recommends weekly spraying with the following mixture. ¼ lb. Tartar Emetic, 1 lb. brown sugar, 6 gal. water.

After the bulbs have been lifted in the fall and the tops cut off, put them in boxes and dust with Naphthalene Flakes, using 1 oz. to 100 bulbs. Cover the boxes with paper and leave them for 4 weeks. Do not use boxes with tight fitting covers as ventilation is important.

At the end of 4 weeks remove the Naphthalene Flakes and store the bulbs as usual.

TRI-GEN not only protects Roses against fungous diseases and insect pests, but it stimulates vigorous plant growth and assures healthy green foliage and luxuriant blooms.

—it is the most revolutionary discovery ever made in the history of Rose culture.

BIRD SUB-IRRIGATOR

Simplified Sub-Irrigation of Flats

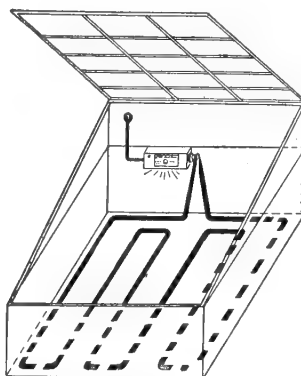

Sub-irrigation is not a new idea. The Bird Sub-Irrigator is a simple and practical application of this principle which has been known for many years. The Bird Sub-Irrigator is a waterproof, fiber resin tray ¾ of an inch deep, serving as a reservoir in the bottom of the flat. It is filled with crushed stone, screened gravel or cinders to allow free flow of water under the soil.

A small clay pot serves as a watering vent permitting water to flow into the drainage without directly wetting the soil. Capillary action draws the moisture slowly and evenly up into the soil as the seedlings or plants require it, thus helping to control damping off and insuring faster growth, better plants and higher yield.

Made to fit our regularly stocked greenhouse flat, 20x12x3 inches. 10c. each

PLANT STARTER

A self watering cypress seed flat one foot square elevated in such a manner that a pan of water can be placed beneath it. Moisture is conveyed to the flat by means of a fiber glass wick, one end being placed in the water and the other passed through a hole in the bottom of the flat. A steady supply of water passing up through the wick assures an even supply of moisture at all times. The starter has one removable side making it easy to remove seedlings or rooted cuttings when ready to transplant. Prevents overwatering, damping off, drying out, and shock to seedlings from cold water.

Plant starter equipped with fiber glass wick. \$1.00.

water or getting wet. The soil is soaked
deeply and thoroughly, covering an area on
all sides of Soil-Soaker. Far more beneficial

CARBOLA

Carbola is primarily a powerful disinfectant that kills certain germs by contact which cannot be seen by the naked eye. This germ killer is combined with a snow-white pigment, same as used in all best oil paints. Thus, when Carbola is applied, it kills invisible germs by contact and dries white all in one easy operation. It can be sprayed or brushed on.

Carbola comes in powder form to which only cold water is needed to make a paint.

Carbola powder, just as it comes in the handy, clean packages, also makes an ideal dry disinfectant. The dry dusting method of disinfecting is considered very practical, especially for floors, dropping boards, nests in poultry houses, etc. where moisture is to be avoided.

Carbola comes in powder form, ready to use. Just mix with any water and apply with brush or spray. Will not clog sprayer.

One pound covers 100 square feet. Will not blister, flake or peel off if used as directed.

DOES YOUR DOG

Itch.. Scratch ?

**DON'T BLAME FLEAS
MANGE... DIET!**

If your dog itches, scratches continually, it's probably not due to fleas, mange or diet. 2 to 1, it's FUNGITCH, grass-borne fungus infection long a puzzle to science. May lead to most serious results—costly care—even total loss. Now a noted specialist's discovery — Sulfadene — applied externally, stops itching in minutes... clears up scales and sores in a few days. Generous treatment—only 98c.

DON'T WASTE GARDEN RUBBISH—CONSERVE IT BY USING ADCO

Garden wastes, including leaves and grass clippings are too valuable to burn or otherwise destroy. Convert them easily into rich, organic manure by employing ADCO, a powder which when mixed with vegetable waste and kept moist gradually converts the material into real manure free from weed seeds. The method of using ADCO is simple. Anybody can use it. Spread your farm and garden rubbish (either in a heap on top of the ground, in a large crate, or in a shallow pit) and every time it becomes 6 inches higher, wet it down, sprinkle with ADCO, and tramp or tamp it down. Repeat these steps until all the rubbish is used, and at least once, at the end of a month, turn it over. In three months or so you will be rewarded with a fine lot of rich, clean, organic fertilizer. 7½ lbs. \$1.00; 25 lbs., sufficient to reduce 10 wheelbarrows of material, \$2.25; 150 lbs. \$10.50.

The Best Mixture for Sunny Lawns

Every good lawn begins with good seed. **Franklin Park Lawn Seed** is good seed. It is recognized as a quality mixture for those who want the best. We blend it ourselves fresh every season from heavy, re-cleaned, live seeds of only those grasses known to be adapted to most all of our soils and climate. A small amount of White Dutch Clover is included. It is free from worthless chaff and dirt. It is high in germination, as tests will prove, and complies with the Massachusetts seed law. **Franklin Park** is used extensively on lawns of fine homes and large estates, in parks and cemeteries all over New England. Under ordinary conditions, 1 lb. (1 qt.) is sufficient to properly seed 250 to 350 square feet.

HINTS ON LAWN PREPARATION AND IMPROVEMENT

Probably we receive more requests each season for help in lawn making and improvement than on any other subject connected with gardening, so we print the following information in hopes that it will answer many of them, though we recognize that practically every lawn presents an individual problem.

Nothing can replace thorough preparation—spading deeply to loosen the soil well—raking to free it from refuse of all kinds and to pulverize it finely—careful grading—enriching sufficiently, and seeding with ample amounts of good seed.

Deep spading improves the mechanical condition of the soil, permitting the tiny roots to penetrate deeply, and secure a maximum of soil food and water. It must be finely pulverized to make a good seed bed. Top soil (preferably a sandy loam) should be spread only on properly prepared sub-soil. Rake well to carefully grade, and always uphill on banks and terraces.

If the soil is known to be sour (acid), apply Land Lime to the rough grade and rake in before spreading either fertilizer or lawn seed. As insurance against the injurious grubs of June bugs and Japanese Beetles, dig in also 8 lbs. of Arsenate of Lead to each 1000 square feet. Broadcast at least 25 lbs. of good plant food like Bonemeal or 6-8-2 to each 1000 square feet, especially under trees.

When sowing your seed, be sure you broadcast it evenly. (A Cyclone Seeder will save seed, time and patience on large areas). Roll, if not sticky, with a water

weight roller to settle the seed uniformly and make the lawn smoother and more presentable. On small spaces simply raking will answer. We advise watering at night or early morning—not when the sun shines. Cut the grass frequently with a sharp lawn mower after it first gets about 3 inches high.

The right kind of a lawn is luxuriant and thick and practically free from weeds. Where do weeds in the lawn come from? Only properly sterilized soil is entirely free from weed seeds. Some may come with top-soil brought in, or from composts not thoroughly rotted, others are carried by the wind and birds, but more are sown each year in impure lawn seed. To secure a maximum of good seed we urge you to buy only Perry's high grade lawn mixtures. But when weeds do appear, dig them out promptly. Scatter in small amounts of additional seed where weeds have been extracted. Always keep a package of Lawn Seed on hand for this purpose.

The first work in the Spring on established lawns is the removal of all litter that has collected during the Winter. With the lawn clean, fill in all hollows with good top soil, and scatter fresh lawn seed and fertilize as for new lawns. Then while the ground is still soft, roll with a water-weight roller—one that can quickly be made heavy or light, at will, to meet conditions. The earlier this work can be done, the better. A rolled lawn will be smoother and have a neater appearance, though repeated rollings may be injurious.
